

ActivityNext

Your operational activity, visible on demand

ActivityNext is Clearstream's self-service operational analytics capability, embedded directly in the Xact Web Portal. It gives clients direct access to operational insights and KPIs, refreshed daily on a D-1 basis.

With interactive dashboards and on-demand access to historical data, ActivityNext replaces manual management information system (MIS) reporting with a streamlined, always-available analytics experience – within the platform you use every day.

By modernizing how you access and use operational data, ActivityNext improves transparency, accelerates decision-making, and enhances your overall operational efficiency.

Why it matters

As post-trade environments grow more complex, timely and transparent access to operational data is critical. ActivityNext moves reporting from a manual, reactive process to an always-on, self-service model.

You can monitor activity, track trends, and identify issues early (without relying on manual report requests) supporting more effective daily oversight.

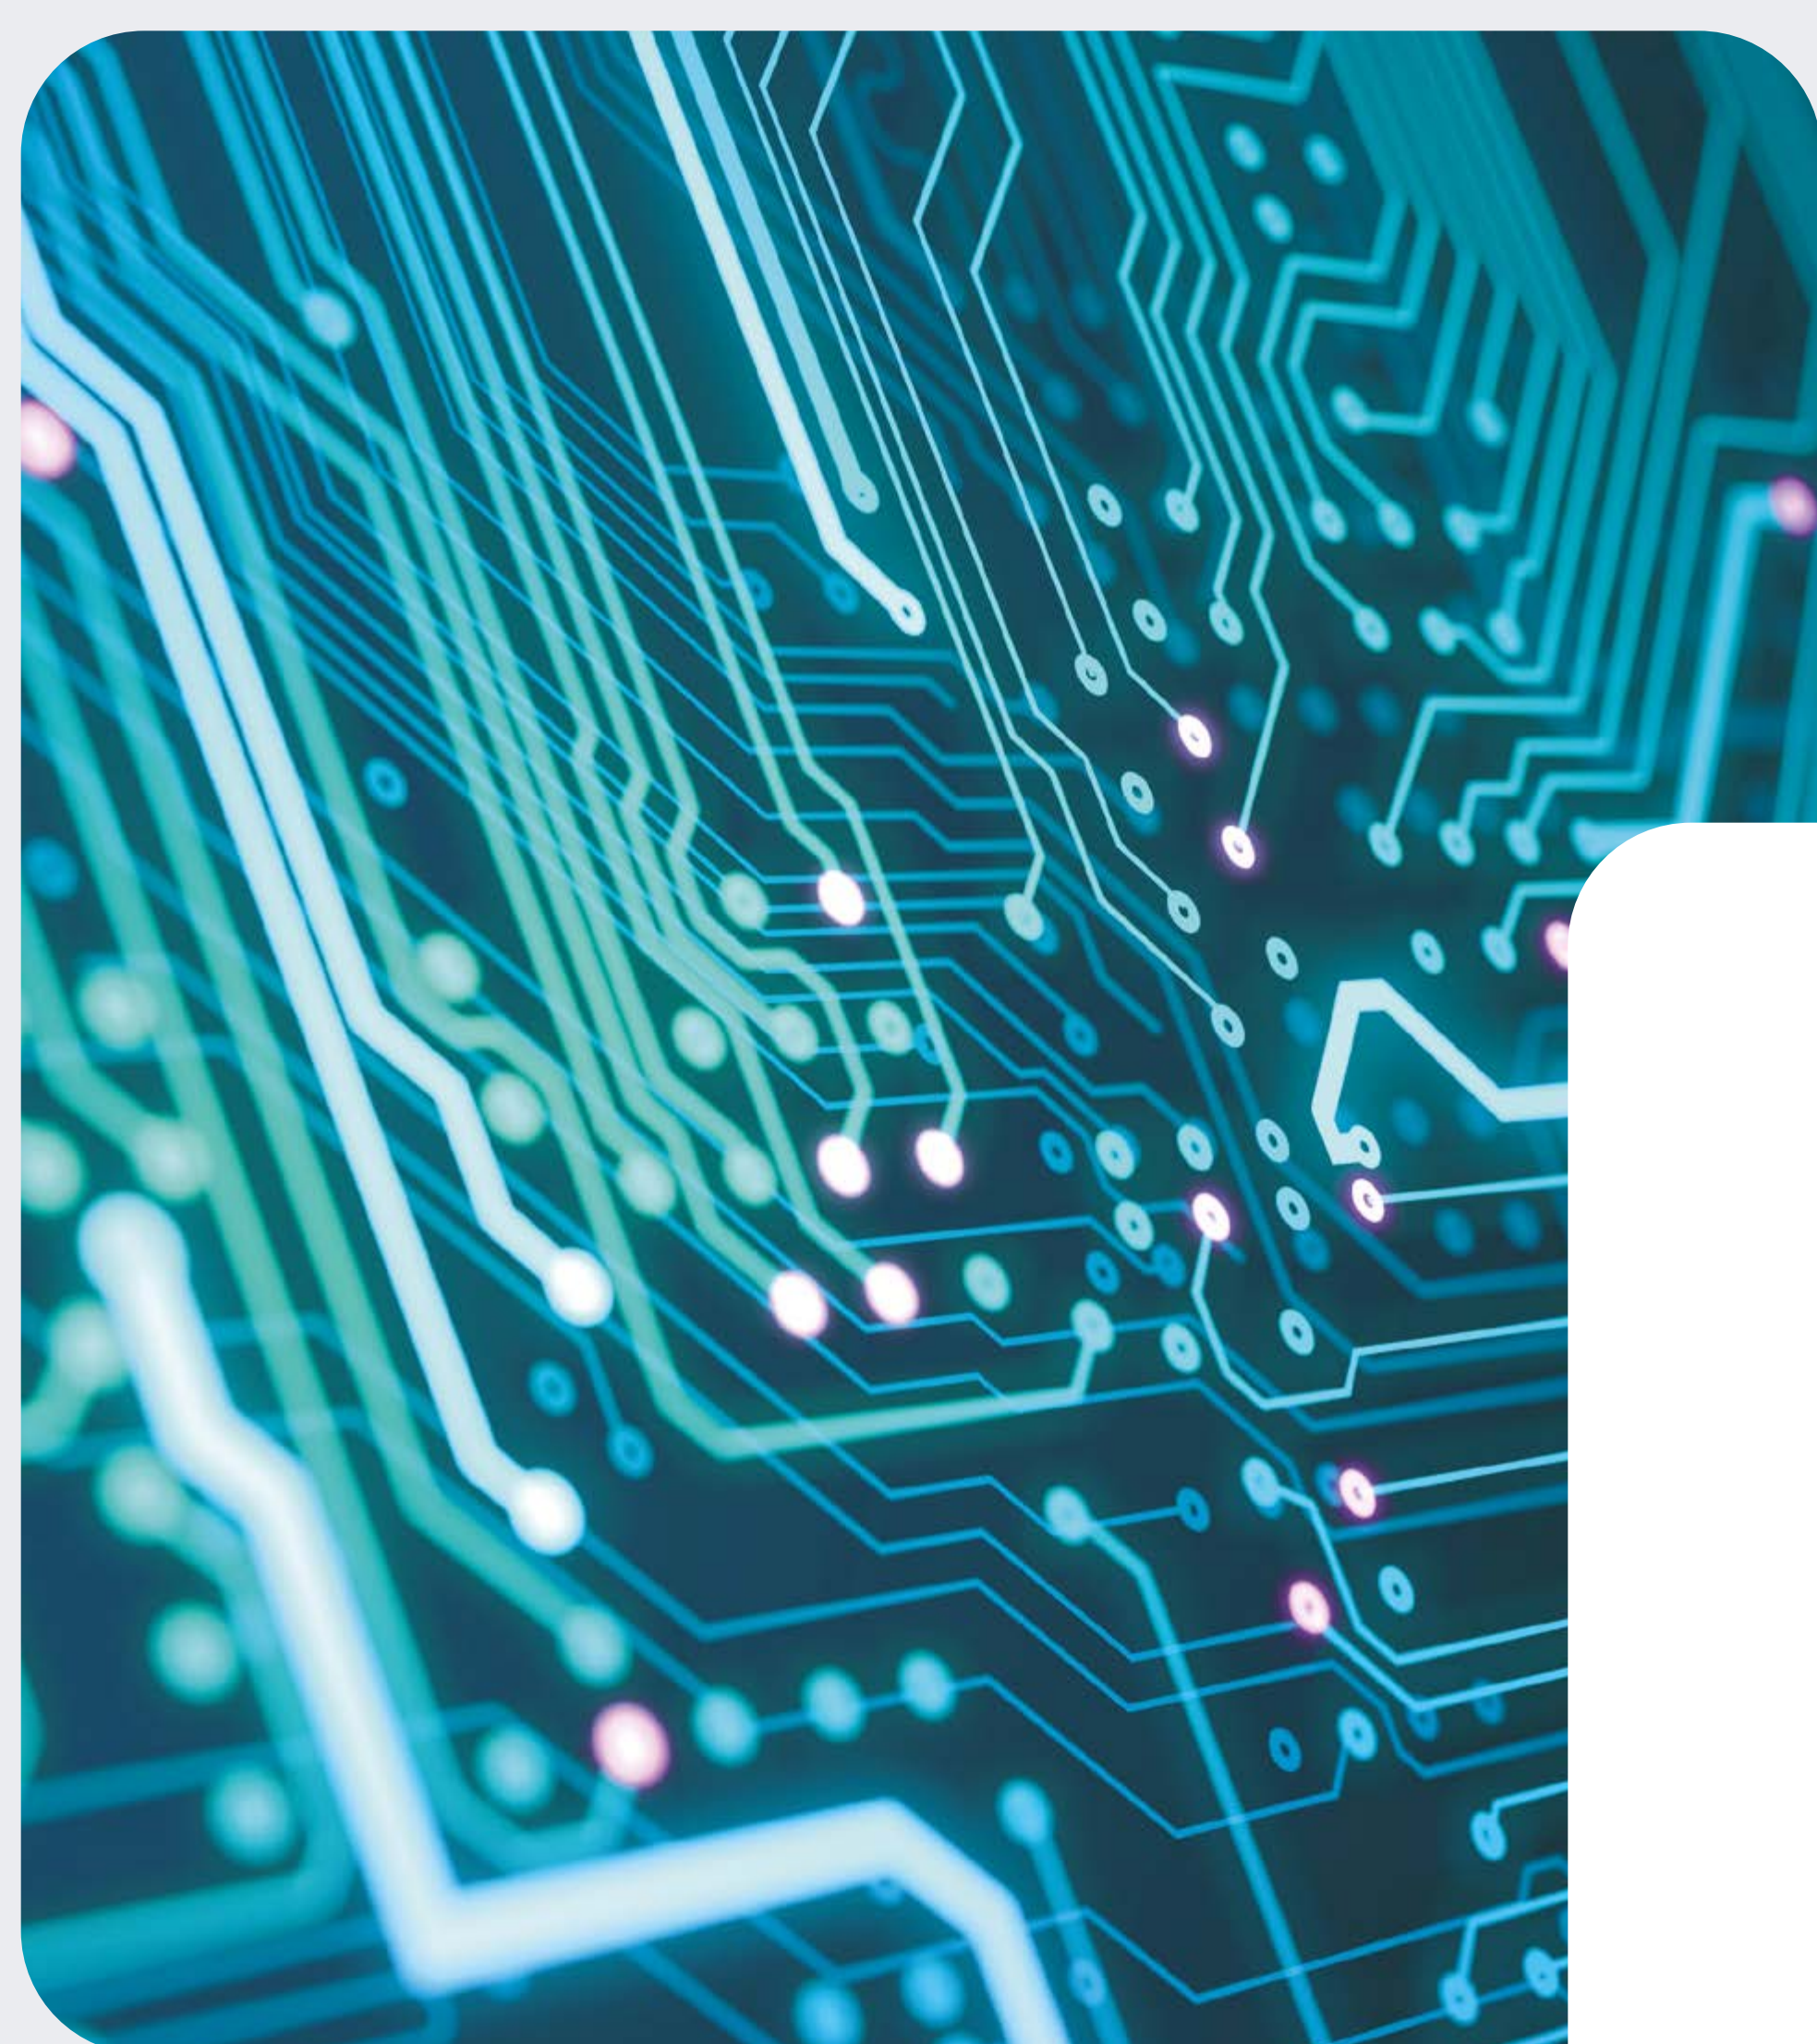

Key features

- Interactive dashboards covering core operational KPIs
- Historical data views for trend and performance analysis
- Self-service reporting with export functionality
- Daily refreshed data for ongoing monitoring
- Fully integrated within the Xact Web Portal

Benefits

- Access operational insights instantly – without manual requests
- Monitor KPIs daily with refreshed D-1 data
- Analyze up to 15 months of historical activity
- Identify trends and act faster on emerging issues
- Export data in PDF or Excel with flexible date ranges
- Reduce reliance on manual reporting workflows
- Improve transparency into your Clearstream activity

Part of the “Next” data ecosystem

ActivityNext is your entry point into Clearstream's “Next” data suite, providing foundational operational visibility.

For deeper analytics, it connects seamlessly to:

SettlementNext | **LiquidityNext** | **LendingNext** | **CollateralNext**

Together, these solutions support a connected, data-driven view of the post-trade lifecycle.
