2.1 Commission Platform

It is assumed that all costs related to the DCR accounts at the custodian level (custody, settlement, connectivity, collateral management, etc.) are borne by the DCR creator. This means that the Trusted Third-Party Layer will not be charged by either TPAs nor by Custodians for acting on behalf of the DCR creators or the DCR holders. Should this however turn out to be the case, such third-party fees would be passed on.

Triparty realignment Access Fee - this is a fixed (**0.5 bps**) fee which will be paid by the DCR holders that request to realign securities from the TTP account at the TPA to their own collateral account at the TPA, for the total value of all securities that they have taken out of any DCR account whilst they owned it.

2.2 TPA Layer details

Same as today (Collateral Giver pays collateral management and settlement fees)

- Custody fee for the assets in a DCR account are to be paid by the original DCR creator (in the frame of their existing custody arrangement).
- In case the DCR holder transfers individual assets out of the DCR account, the custody fee is to be paid on the account receiving the transfer.

3.5 Fee and valuation principles

3.5.1 Client accounts

Unless otherwise specified the Custody Platform fee schedule applies to all account types, that is, custody accounts opened with Clearstream International S.A.

3.5.2 Supported markets for principal securities

France, Germany, The Netherlands, United Kingdom, United States of America. The list will be updated as new markets are added.

3.5.3 Safekeeping fee and securities valuation principles

- Safekeeping fees are calculated monthly and are based on the daily average volume of assets under custody. Positions are fixed at the end of each settlement day.
- Valuation of instruments other than debt: the volume of assets under custody is obtained by multiplying the market price by the quantity held. Market prices are collected from recognised data vendors or alternatively from the local agent or CSD appointed by Clearstream. They are applied daily. Where no market price is found, Clearstream will use the issue price. Where no issue price is found, Clearstream will use a default issue price of 1.
- Valuation of debt instruments: at nominal value or at unit multiplied by the nominal value per unit (NVU).
- The assets under custody value of non-EUR securities is converted into EUR at the exchange rate prevailing at the end of the month.
- All safekeeping prices are quoted in basis points per annum (1 bp = 0.01 percent = 0.0001).
- Monthly safekeeping fees are calculated as follows:

$$\text{rate in bp} \times \frac{\text{average daily value of securities} \times \text{number of days in calendar month}}{360}$$

3.5.4 Other principles

Under the ASL DvD use case, the fees mentioned in this schedule are applicable to principal securities and not to collateral securities. As costs related to collateral securities moving through a Triparty Agent will normally be borne by the collateral giver (that is, the DCR Creator). However, Clearstream reserves the right to pass on these costs if this is not the case.
