Collection Description

OneClearstream - CBPR+ (SR2024) - Customers ([link](#))

This is the Cross-Border Payment and Reporting Collection part of Standards Release November 2024 for Clearstream.

It contains 14 Usage guidelines that will go live in November 2024.

Usage Guideline Description

CBPRPlus-pacs.009.001.08_FinancialInstitutionCreditTransfer ([link](#))

Principles:

1. AGENTS IDENTIFICATION - Textual Rules

-> If BICFI is present, then (Name & Postal Address) is NOT allowed (ClearingSystemMemberIdentification and LEI may complement) – However, in case of conflicting information, the BICFI will always take precedence.

-> If BICFI is absent, (Name & Postal Address) OR [(Name & Postal Address) and ClearingSystemMemberIdentification] must be present.

Exception: If BICFI is absent, whenever Debtor Agent, Creditor Agent and all agents in between are located within the same country, the clearing code only may be used.

Note: "Instructing/ Instructed Agents" must be identified with a BICFI - Clearing System Members Identification and LEI are optional.

2. Single transactions only are allowed.

3. Character Set:

All proprietary and Text fields EXCLUDING Name and Address for all actors and Related Remittance Information and Remittance are limited to the FIN-X-Character set.

All Name and Address for all actors, Related Remittance Information and Remittance Information (structured and unstructured), Email Address where included as part of a proxy element are extended to support the following additional characters:

!#\$%&*^_{}~";<>@[

< is replaced with <

> is replaced with >

4. CBPR_Agent_PointToPointOnSWIFT:

If the transaction is exchanged on the SWIFT network (ie if the instructing agent/sender and instruted agent/receiver of the message are on SWIFT), then BICFI is mandatory and other elements are optional, eg LEI

Outline

In the Collection OneClearstream - CBPR+ (SR2024) - Customers, the message CBPRPlus-pacs.009.001.08_FinancialInstitutionCreditTransfer is composed of a mandatory Business Application Header V02 (head.001.001.02) and a Document.

Business Application Header V02 (head.001.001.02)

The Business Application Header V02 (head.001.001.02) is composed of 15 elements.

a - Character Set

Contains the character set of the text-based elements used in the Business Message.

b - From

The sending MessagingEndpoint that has created this Business Message for the receiving MessagingEndpoint that will process this Business Message.

Note the sending MessagingEndpoint might be different from the sending address potentially contained in the transport header (as defined in the transport layer).

c - To

The MessagingEndpoint designated by the sending MessagingEndpoint to be the recipient who will ultimately process this Business Message.

Note the receiving MessagingEndpoint might be different from the receiving address potentially contained in the transport header (as defined in the transport layer).

d - Business Message Identifier

Unambiguously identifies the Business Message to the MessagingEndpoint that has created the Business Message.

e - Message Definition Identifier

Contains the MessageIdentifier that defines the BusinessMessage.

It must contain a MessageIdentifier published on the ISO 20022 website.

example camt.001.001.03.

f - Business Service

Specifies the business service agreed between the two MessagingEndpoints under which rules this Business Message is exchanged.

To be used when there is a choice of processing services or processing service levels.

Example: E&I.

g - Market Practice

Specifies the market practice to which the message conforms. The market practices are a set of rules agreed between parties that restricts the usage of the messages in order to achieve better STP (Straight Through Processing) rates.

A market practice specification may also extend the underlying message specification by using extensions or supplementary data of this underlying message.

h - Creation Date

Date and time when this Business Message (header) was created.

i - Business Processing Date

Processing date and time indicated by the sender for the receiver of the business message.

This date may be different from the date and time provided in the CreationDate.

Usage: Market practice or bilateral agreement should specify how this element should be used.

j - Copy Duplicate

Indicates whether the message is a Copy, a Duplicate or a copy of a duplicate of a previously sent ISO 20022 Message.

k - Possible Duplicate

Flag indicating if the Business Message exchanged between the MessagingEndpoints is possibly a duplicate.

If the receiving MessagingEndpoint did not receive the original, then this Business Message should be processed as if it were the original.

If the receiving MessagingEndpoint did receive the original, then it should perform necessary actions to avoid processing this Business Message again.

This will guarantee business idempotent behaviour.

NOTE: this is named "PossResend" in FIX - this is an application level resend not a network level retransmission.

l - Priority

Relative indication of the processing precedence of the message over a (set of) Business Messages with assigned priorities.

m - Signature

Contains the digital signature of the Business Entity authorised to sign this Business

Message.

n - Related

Specifies the Business Application Header(s) of the Business Message(s) to which this Business Message relates.

Can be used when replying to a query; can also be used when canceling or amending.

o - CrossElementComplexRule : RelatedPresentWhenCopyDupl
